Bacteriol. 176:7601-7613(1994).

-!- FUNCTION: REGULATES THE TRANSCRIPTION OF GENES INVOLVED IN THE BIOSYNTHESIS OF AFIMBRIAL ADHESIN-III.

-!- SIMILARITY: HIGH TO E.COLI DAAA; SOME, TO E.COLI PAPB.

-!- CAUTION: It is uncertain whether Met-1 or Met-17 is the initiator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Garcia M.-I., Labigne A., le Bouguenec C.L.; "Nucleotide sequence of the afimbrial-adhesin-encoding afa-3 gene "Nucleotide sequence of the afimbrial flanking IS1 insertion sequences.";

Full-length cDNA from Arabidopsis thaliana.";
Submitted (MAR-2002) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Required for vesicular transport between the endoplasmic reticulum and the Golgi apparatus. Binds to SNARE complex and then recruits NSF to disassemble it (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic peripheral membrane protein (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         similarity).
-!- SIMILARITY: Belongs to the SNAP family.
-!- CAUTION: Ref.2 sequences differ from that shown due to erroneous gene model prediction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Transport; Protein transport; Endoplasmic reticulum; Golgi stack; Multigene family.

Genome Res. 6:590-600(1996).

-!- FUNCTION BE REQUIRED FOR THE FORMATION OF A FUNCTIONAL

NITROGENASE FE PROPEIN. PROBABLY ACCEPTS ELECTRONS FROM FIXA/FIXB

AND REDUCES A QUINONE.

-!- COPACTOR: FAD (Potential).

-!- SIMILARITY: Belongs to the ETF-QO / fixC family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

"Complete genome sequence of Vibrio vulnificus CMCD6.";
Submitted (DEC-2002) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Required to facilitate the formation of correct
disulfide bonds in some periplasmic proteins and for the assembly
of the periplasmic c-type cytochromes. Acts by transferring
electrons from cytoplasmic thioredoxin to the periplasm. This
transfer involves a cascade of disulfide bond formation and
reduction steps (By similarity).
-!- CATALYTIC ACTIVITY: Protein dithiol + NAD(P) + = protein disulfide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             THIOL: DISULFIDE INTERCHANGE PROTEIN DSBD.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Outer layer protein VP4 - human rotavirus A (serotype G3, strain AU-1)
N/Alternate names: hemagglutinin; outer capsid protein VP4
N;Contains: outer layer protein VP5; outer layer protein VP8
C;Species: human rotavirus A
C;Species: human rotavirus A
C;Species: human rotavirus A
C;Species: human rotavirus A
C;Accession: U21638
R;18egawa, Y.; Nakagomi, O.; Nakagomi, T.; Ueda, S.
J; Gen. Virol. 73, 1939-1946, 1992
A;Accession: U21638; MUID:92356070; PMID:1322955

NyAlternate names: glycoprotein VP3; hemagglutinin; outer capsid protein VP3
N;Contains: outer layer protein VP5; outer layer protein VP8
C;Species: simian rotavirus SAll
A;Note: host (monkey)
C;Decies: simian rotavirus SAll
A;Note: host (monkey)
C;Accession: B31159

New nucleic acid molecule useful for treating disease, e.g. infertility, impotence, or testicular cancer.

Claim 17; Page 40; 61pp; English.

The present sequence represents an epitope-bearing portion of human fibroblast growth factor-21 (FGF-21). FGF proteins regulate growth and differentiation of a variety of cell types. FGF-21 nucleic acids and polypeptides are useful for treating diseases and disorders characterised by inadequate numbers of hepatic cells, preferably cirrhosis of the liver. They may also be used in the treatment of infertility, impotence, and testicular cancer, as well as leukemia, lymphoma, autoimmune disease, or proliferative disorders of the thymus

New variants of fibroblast growth factor, useful for treating skeletal disorders including osteoporosis, malignancies and to enhance wound and fracture healing.

Disclosure; Fig 1; 74pp; English.

The present invention describes an active variant (I) of a fibroblast growth factor (FGF) having at least one mutation in the beta-8-beta-9 crowth factor (FGF) having at least one meutation in the beta-8-beta-9 crowd and an an activative statements of the corresponding wild type FGF, by decreasing the biological activity mediated by at least one receptor subtype. (I) has cytostatic, vulnerary, osteopathic and antianthritic activities. (I) can be used as a regulator of vasculogenesis or angiogenesis. (I) is useful for preparing a medicament and for treating a disease or disorder related to normal or abnormal FGF receptors FGFRs), especially skeletal disorders, cancer, to enhance bone fracture healing or bone growth processes and wound healing processes. (I) is useful in detection and treatment of various FGFR related disorders including skeletal disorders e.g. achondroplasia, and osteoporosis, and cartilage defects, multiple myploma, epithelial cancers such as transitional cell carcinoma of the bladder and cervical carcinoma. The novel mutants are useful in high carpies of FGFRs in various disorders such as transitional cell carcinoma of the captesion systems unitable for pharmaceutical production, targeting of and serve as template for the formation of improved agonists and carcinoma manner cancer as a processer of any sor other agents to tissues and cells having specific FGFR subtypes, antagonists of FGFRs in various disorders such as switch as skeletal disorders and manner cancer as the contamer as the contament of a skeletal disorders and manner cancer as and cells as skeletal disorders and manner cancer as the contament of a skeletal disorders and manner cancer as the contament of a skeletal disorders and cancer meet an extended to contame and cells as skeletal disorders and cancer as the contament of any contament of the contament of a skeletal disorders and cancer meet and cells and cells and cells and cells and cells and cells and cells and cells and cells and cells and cells and cells and cells and cell cancer. The present sequence represents a FGF core structure amino acid sequence which is given in the exemplification of the present invention

Thomason AR,

Novel isolated fibroblast growth factor-like polypeptide useful for treating, preventing or ameliorating cirrhosis, inflammatory bowel disease, mucositis, Crohn's disease, diabetes, obesity, stroke and osteoporosis.

Claim 14; Page 116-117; 138pp; English.

The sequence represents a fragment of a fibroblast growth factor-like (FGF-like) polypeptide. FGF-like protein and its associated nucleic acid play a role in modulating body growth, maturation or life-span. They are play a role in modulating by growth, maturation or life-span. They are consultable in the consultable in ameliorating disorders such as circhosis, inflammatory bowel disease, mucositis, Crohn's disease, circhosis, inflammatory bowel disease, mucositis, contexting astrointestinal abnormalities, neurodegenerative confiseases, damage to renal tubules as a result of acute tubular necrosis, haematopoietic cell reconstitution following chemotherapy, wasting syndromes (e.g., cancer associated cachexia), damage to the corneal cyndromes (e.g., cancer associated cachexia), damage to the corneal cyndromes (e.g., cancer associated cachexia), damage to the corneal cyndromes (e.g., cancer associated cachexia), damage to the corneal cyndromes, multiple sofelerosis, myopathies, short staturation, alopecia, abnormalities of androgen target organs, premature maturation, alopecia, abnormalities of androgen target organs, conchopulmonary dysplasia, acute respiratory distress syndrome, tumours of the eye or other tissues, arberosclerosis, hypercholesterolemia, stroke, osteoporosis, osteoarbritis, muscle atrophy, sarcopenia, cardiac function, immune system dysfunction, cancer, Parkinson's disease,
